

Website Portfolio

— Abdullah AL-Otaibi

Portfolio — Website

Game-Inspired Personal Portfolio Website

A web portfolio designed like a game inventory to present my skills, projects, quests, achievements, and contact information in an interactive way.

Introduction

Project Overview and Objectives

Project

This project is a personal portfolio website with a game-style interface. Instead of using a normal portfolio layout, the website presents information through inventory items, skill bars, quests, achievements, and hidden content.

Objectives

- Show my skills, projects, education, tools, and contact information
- Make the portfolio more memorable and interactive
- Connect my interest in game development with web development

Personal Motivation

I wanted my portfolio to reflect who I am: a computer science student and game developer who enjoys building interactive experiences.

Technical Demonstration

Live Demonstration of Key Features

In this part of the presentation, I will open the portfolio website and show how the main features work

What I will demonstrate

- The game-style home screen and character profile
- The Inventory tab and clickable portfolio items
- The Skills tab with progress bars
- The Quests tab and sorting buttons
- The Achievements section
- The Secret Item / hidden feature

Technical Deep Dive

Challenges, Solutions, and Lessons Learned

Challenges Solved

- Designing an interactive UI system
- Managing dynamic tab and content
- Structuring game-like data(skills, quests, items)

Not Implemented

- Backend (database, authentication)
- Full AI integration
- Persistent data storage

Future Work

- Add backend (Node.js + DB)
- Implement real AI features
- Expand system (more quests, features)

Lessons Learned

- Importance of UI/UX design
- Managing dynamic frontend systems
- Thinking beyond traditional portfolios

Conclusion

Outcomes

 [AbdullahAlotaibics \(Abdullah\)](#)

This project resulted in a fully interactive portfolio that improved my frontend and UI/UX skills while showcasing a unique design. In the future, I plan to deploy it online, enhance animations, and add AI-powered features.
